Review Questions

1. citric acid (weak electrolyte), sodium chloride, sodium citrate, and potassium dihydrogen phosphate

2.

A voltage of at least 4.07 V would be required to operate this cell.

3. because the products (Na and Cl₂) spontaneously react with each other

4.

	Cell Type (1,2,3)	Electrolyte	Anode/Cathode	Products	
				Anode	Cathode
a.	1	NaCl(<i>l</i>)	Pt / Pt	Cl₂	Na
b.	2	NaCl(<i>aq</i>)	Pt / C	Cl₂	H₂ + 2OH⁻
c.	2	CuBr ₂ (<i>aq</i>)	C / C	Br₂	Cu
d.	2	AlF ₃ (<i>aq</i>)	C / C	½O₂ + 2H⁺	H₂ + 2OH⁻
e.	3	CuCl ₂ (<i>aq</i>)	Cu / Cu	Cu²⁺	Cu

5. a. Anode $\text{H}_2\text{O} \rightarrow \frac{1}{2}\text{O}_2 + 2\text{H}^+ + 2\text{e}^-$ $E^\circ = -1.37 \text{ V}$
(approximate)

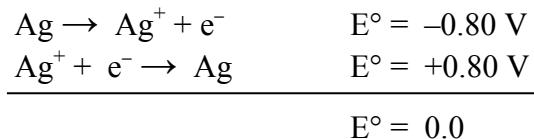

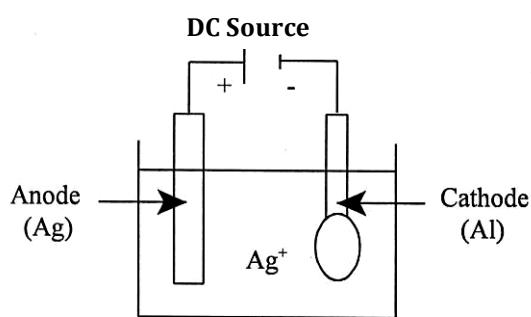

Cathode $\text{NO}_3^- + 4\text{H}^+ + 3\text{e}^- \rightarrow \text{NO} + 2\text{H}_2\text{O}$ $E^\circ = +0.96 \text{ V}$

 $E^\circ = -0.41 \text{ V}$

b. A voltage of at least 0.41 V would be required to operate this cell.

6. $2\text{H}_2\text{O} + 2\text{e}^- \rightarrow \text{H}_2 + 2\text{OH}^-$

7. In electrorefining, the metallic ions reduced at the cathode are replaced by oxidizing an impure anode.
8. Uneconomical to electrolyze $\text{Al}_2\text{O}_3(l)$ because aluminum oxide has a high melting point. Impossible to produce Al by electrolyzing $\text{Al}_2\text{O}_3(aq)$ because water is a stronger oxidizing agent than Al^{3+} .
9. In impressed current cathodic protection the metal being protected acts as the cathode in an electrolytic cell (non-spontaneous redox reaction) whereas in galvanic cathodic protection the metal being protected acts as the cathode in an electrochemical cell (spontaneous redox reaction).
- 10.

In theory, it should require no voltage to operate this cell because no net reaction occurs. In practice, a small voltage is required to overcome the internal resistance of the cell.

11. a. Type 1 Cell. Only one chemical, water, can be oxidized or reduced. Water is molten H_2O .
 b. Any salt containing ions which are weaker reducing agents and weaker oxidizing agents than water; for example, sodium sulphate.

12. 0.75 V
